

SPLASH SUITS

RINBA SCOUT LIQUID TIGHT CHEMICAL SPLASH SUITS

Scout I

Scout II

The Scout is a chemical protective suit that can be used very quickly in the event of accidents in which chemical contamination can occur. Fire brigades and disaster controllers are often unexpectedly exposed to dangerous chemical substances. If the situation requires a quick response there is generally no time for the procedure of putting on a complete chemical and gas-tight proof suit. For these situations NORTH has developed the Scout chemical protective rescue suit.

Two types of Scout suits are available. The one-piece Scout I consists of a full chemical resistant overall that has a 180 cm zipper from knee to head with protective Velcro flap. The two-piece Scout II consists of a trouser apron that can be pulled over the SCBA. The full-face mask can then be put on and the jacket, in the form of a poncho, can be put on over the head.

The Scout is made of flexible, comfortable Neoprene, which is known for its excellent chemical resistance and the mechanical strength of the material.

Both the Scout I and the Scout II are designed with the unique glove adapters. This makes it possible to provide the suits with gloves, which provides a liquid proof connection between arm and hand. The attached safety boots, provided with steel sole and toecap, are available in sizes 43 and 46 (UK sizes 9 and 11). The overall is available in sizes L (43) and XL (46).

PRODUCT FEATURES AND BENEFITS

- Quick and simple procedure.
- Fits over all existing fire-fighting clothing and breathing apparatus.
- Made of durable though lightweight Neoprene.
- Two types: one piece overall and two piece jacket and trousers for ideal fit and comfort.
- Large, acetate visor for clear field of vision.
- Simple closure by means of zipper and Velcro fastening.
- Easy-to-change gloves without the suit having to be removed.

Technical description Rinba Scout I & II

Part number	A164500 & A164502
Sizes	L (43) / XL (46)
Standard	EN 466
Material	Double coated Neoprene
Seams	Liquid tight (class 3)
Material visor	2mm Acetate and anti-fog
Closure	Zipper with Velcro closing
Gloves	Exchangeable, Nitril rubber (EN 374)
Boots	(Sealed) Nitril rubber safety boots (EN 345)
Breathing apparatus	Inside suit (not supplied)
Options	Reflecting characteristics
Weight	2500 grams
